

FullView™ Sightglass

After four decades in service, HOLLOWAY AMERICA's sanitary FullView™ Sightglass design remains consistent.

The Problem

There are *numerous* sightglass options available in the market today. But, they all provide either a limited process viewing area, or a full process viewing area with a high price tag.

The Solution

HOLLOWAY AMERICA's FullView™ design provides full process visibility equivalent to the full diameter of the ferrule to which it's attached, *all* at a very cost-effective price point. Parts are easily replaceable and always in stock (replacement parts or complete units can ship in as little as one day). And with thousands in service over the last four decades, you can be confident the FullView™ Sightglass is your best overall choice.

Advantages

- This assembly comes with one (1) stainless retainer, one (1) borosilicate sightglass, one (1) silicone o-ring, one (1) ferrule gasket, and one (1) 13MHHM clamp.
- The sightglass maintains a 100 psig rating, allowing a wide range of operational pressures.
- Fits any tri-clamp style ferrule for universal operation.
- Fabricated since 1980 with a proven track record of consistent reliability.
