

Seal Break Pliers™

The Seal Break Pliers™ easily separate each process connection from gasket seals on a process vessel.

The Problem

After heavy use, a gasket seal can often become heat sealed, vacuum sealed, or otherwise bonded to the process connection, causing a frustrating and expensive stoppage to your process. In the interest of getting back to work, employees commonly resort to forcing the process connection and gasket seal apart with the nearest screwdriver.

This poses a major risk of gouging the process vessel, potentially contaminating the sanitary connection and preventing it from sealing correctly in the future, and could endanger the safety of the employee attempting to fix the issue.

The Solution

The innovative new Seal Break Pliers™ not only protect every sanitary connection from needless carbon contamination, the plier set is designed to protect your valuable process vessel from damage. Featuring quality stainless steel and quick-grip functionality that eliminates the temptation to hassle with screwdriver and hammer, our pliers are simply more convenient to use.

Don't risk the damage.

Trust the HOLLOWAY-engineered Seal Break Pliers™ on every connection, every time.
